EDUCATION

The George Washington University

Master of Science, Computer Science

Aug 2025 – May 2027

Washington, D.C.

Istanbul Arel University

Bachelors of Science, Computer Engineering

Oct 2021 – Jun 2025

Istanbul, Turkey

TECHNICAL SKILLS

Languages: Java, C, C++, JavaScript (ES6+), TypeScript, Python, SQL, HTML/CSS

Frameworks: React, React Native, SolidJS, Next.js, Express, Spring Boot, PostgreSQL, MongoDB, FastAPI, REST APIs, MVC, SQLite3. Redux, Redux Toolkit

Developer Tools: Docker, Jest, Netlify (CI/CD), JUnit, Mockito, Pytest, Spring Test, Github, Git, Gitlab

EXPERIENCE

B Tech Analytics Technology

Software Engineer

May 2025 – Aug 2025

Istanbul, Turkey

- Developed a commercial **BI platform** using **SolidStart**, **TailwindCSS**, and **Apache ECharts**, integrating data pipelines and interactive visualizations to deliver competitor pricing and market-trend analytics to manufacturing clients.
- Engineered interactive dashboards** with dynamic filters and migrated backend from **SQLite** to **DuckDB**, reducing query latency by **~45%**

B Tech Analytics Technology

Software Engineer Intern

Feb 2025 – May 2025

Istanbul, Turkey

- Refactored landing page** legacy code from **Bootstrap/jQuery** to **TailwindCSS** and **TypeScript**, boosting Lighthouse **performance by 25%** and improving **maintainability**, and **responsiveness**.
- Built an automation pipeline to batch-convert and compress images from **PNG** to **WebP**, cutting asset load times by **~50%** and improving overall site performance.

PROJECTS

Eco Transcribe | *React Native, Spring Boot, FastAPI, Docker, PostgreSQL, MongoDB*

Jan 2025 – Jun 2025

- Developed a cross-platform mobile app using React Native for real-time audio recording, transcription, summarization, and AI-powered Q&A, integrating Cloudinary and a hybrid PostgreSQL/MongoDB database.
- Designed two separate AI-powered microservices: one using FastAPI for real-time speech-to-text transcription, and another using Spring Boot with LLaMA for NLP for tasks such as summarization, translation and Q&A chatbot.(summarization/translation).
- Delivered real-time transcription & multilingual summarization with **95%** accuracy; deployed via Spring Cloud Eureka for scalable, fault-tolerant services.

Multithreaded Image Processing Application | *C++*

Mar 2024 – May 2024

- Implemented a multithreaded image processing application in C++ to apply a Gaussian blur filter across large image datasets, optimizing performance through parallelization, resulting in a **78%** speedup.
- Partitioned each image into independent row segments and assigned threads to process them concurrently, ensuring even workload distribution and high CPU utilization.
- Structured the application into distinct stages for file loading, parallel row-level filtering, and PNG output, improving clarity, maintainability, and predictable scaling as thread counts increase.

Apartment-seeker | *React, Redux, Node.js, Express.js, MongoDB, EJS, Mapbox*

Jan 2024 – Mar 2024

- Created frontend with EJS and Bootstrap, integrating Mapbox maps to facilitate locating posts based on desired locations.
- Developed an Express Node backend with MongoDB for seamless CRUD operations, enabling users to register, login, post, and edit content.
- Integrated real-time chat functionality using Socket.IO and stored messages in MongoDB.
